National Laboratory

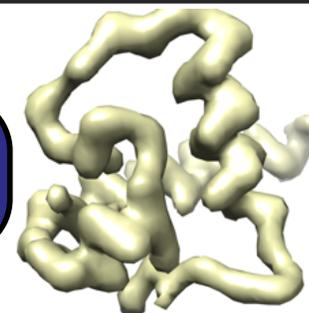

Cryo-EM tools in Phenix

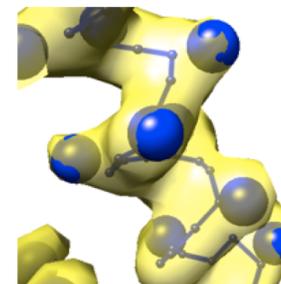

Map-to-model: Cryo-EM model building

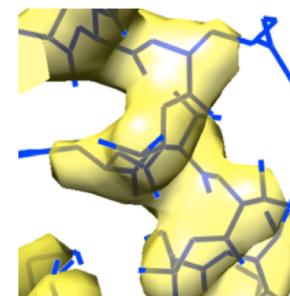

Isolate density for a chain

Identify C_{α} and C_{β} positions from side-chain density

Construct and refine all-atom model

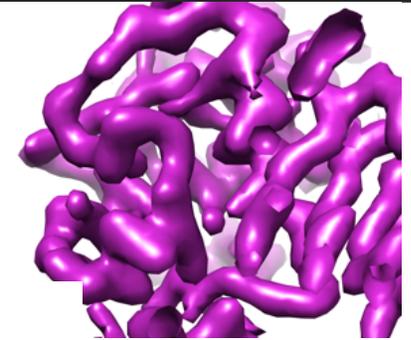

Terwilliger et al., (2018) Nature Methods 15, 905–908

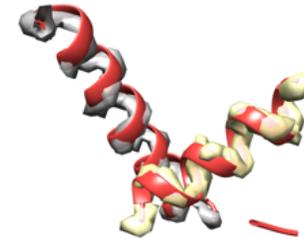

Terwilliger et al., (2020) Protein Science 29, 87-99

Isolating density for a chain

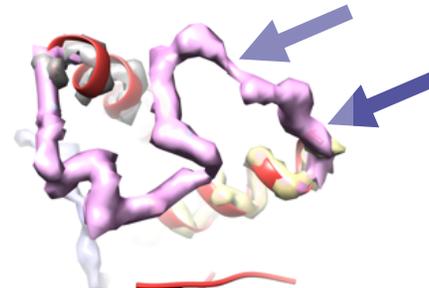

Trace chain the way a person does

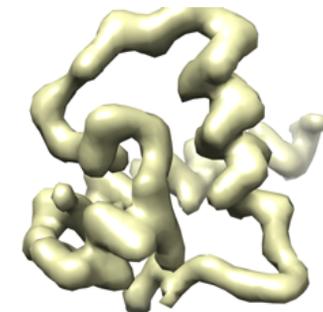

Find secondary structure (helices, strands)

Find connections: adjust contour level until a region just connects to one other

Iterate to build up chain

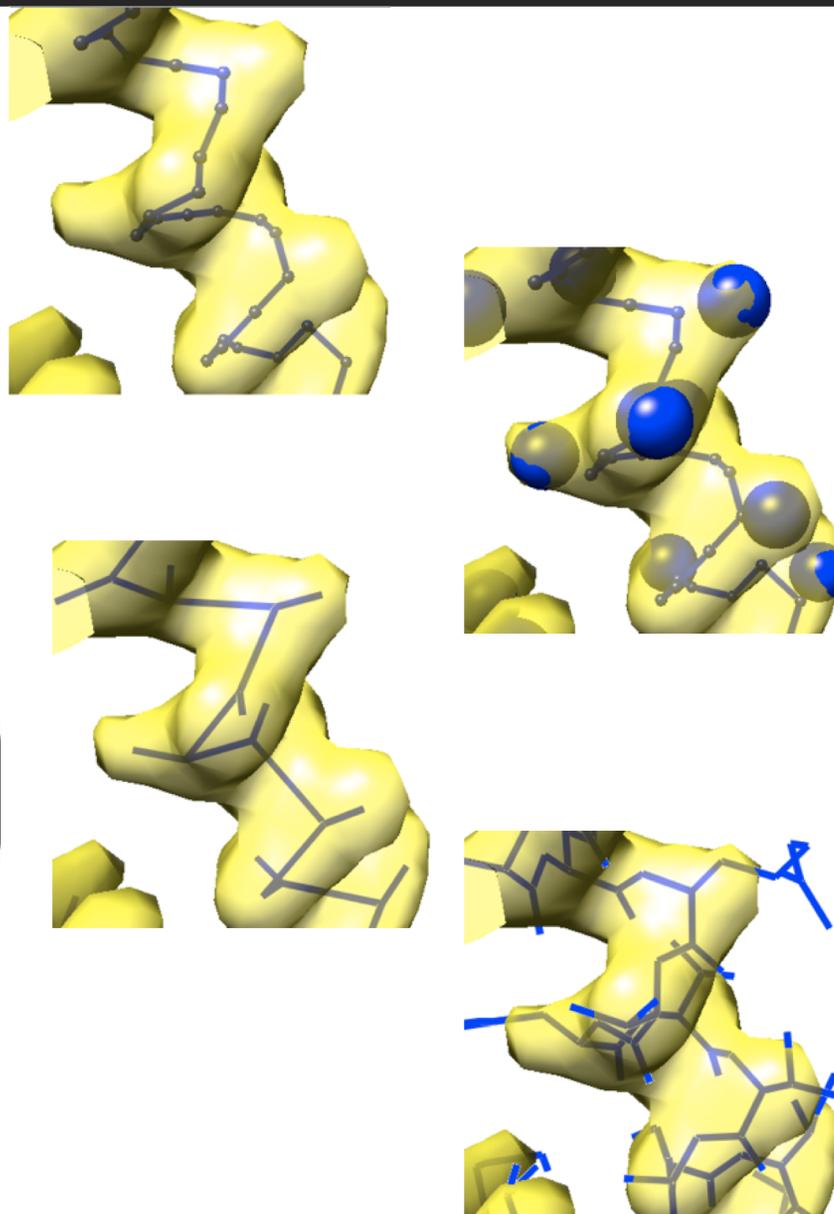

Finding C_{α} and C_{β} positions

Trace chain path
through high density

Find C_{β} positions from
side-chain density

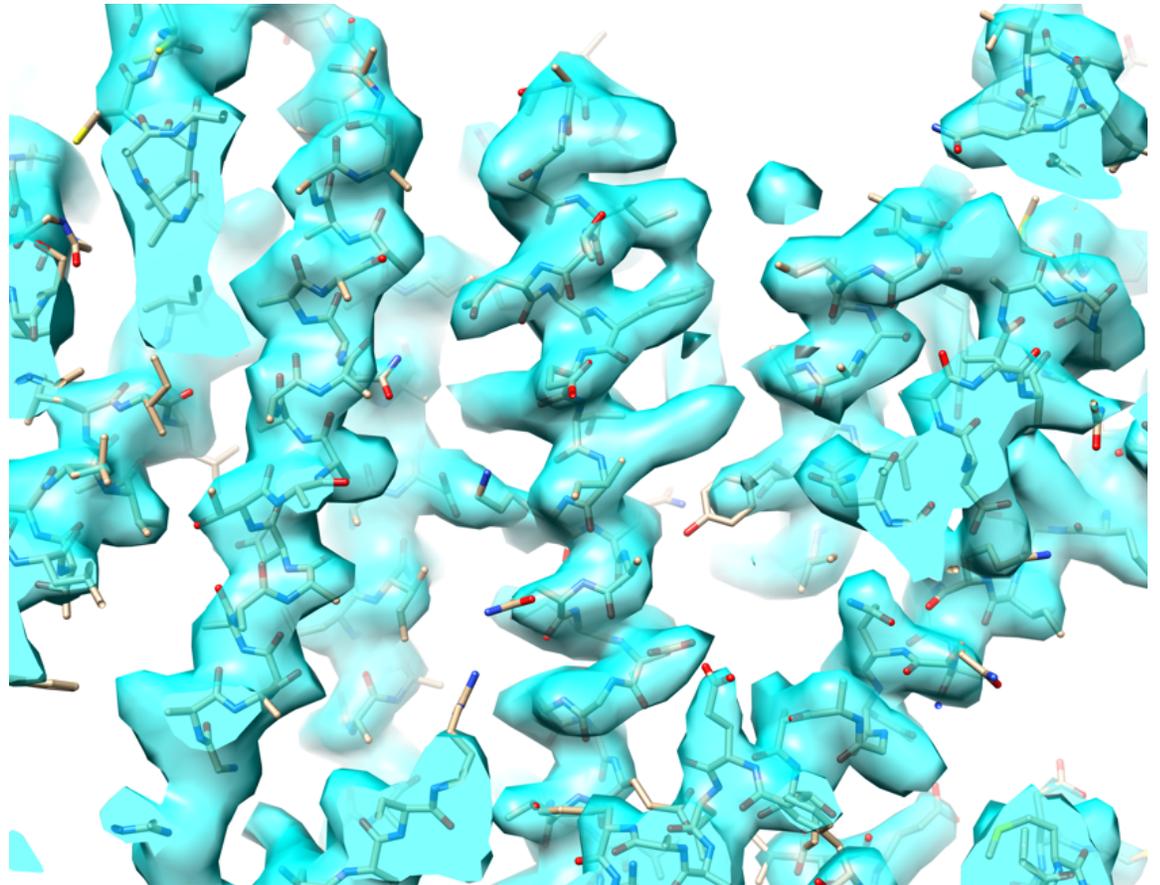

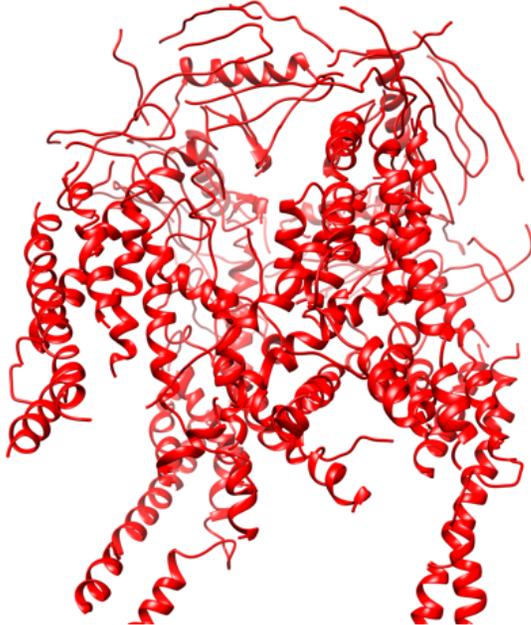

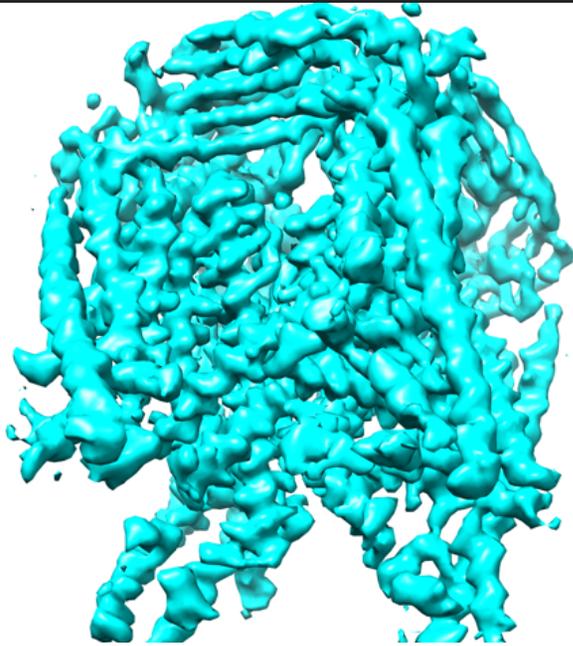

Choose C_{α} positions
3.8 Å apart and next to
 C_{β} positions

Construct all-atom
model with Pulchra*
and refine

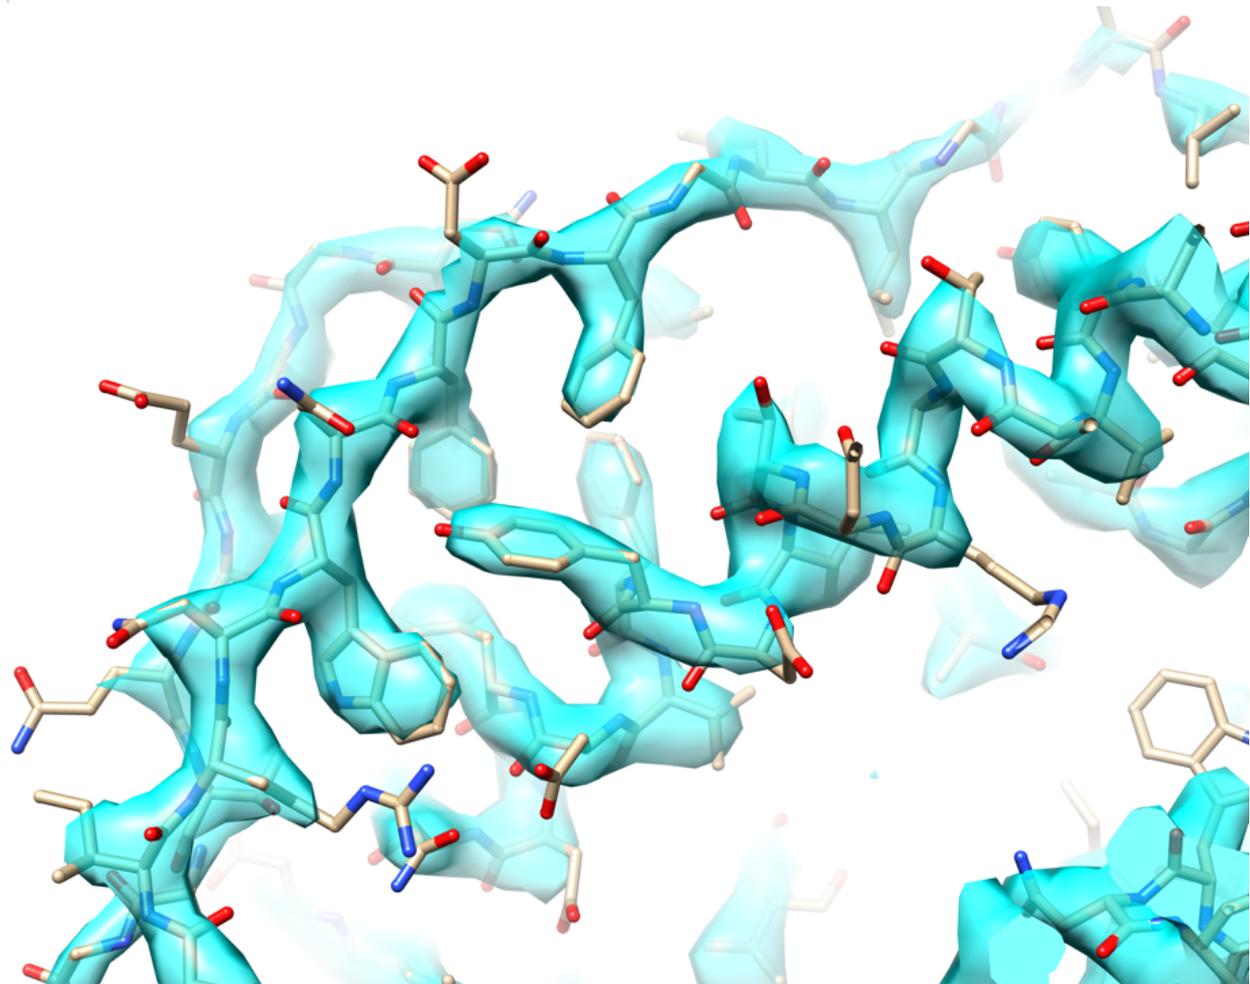

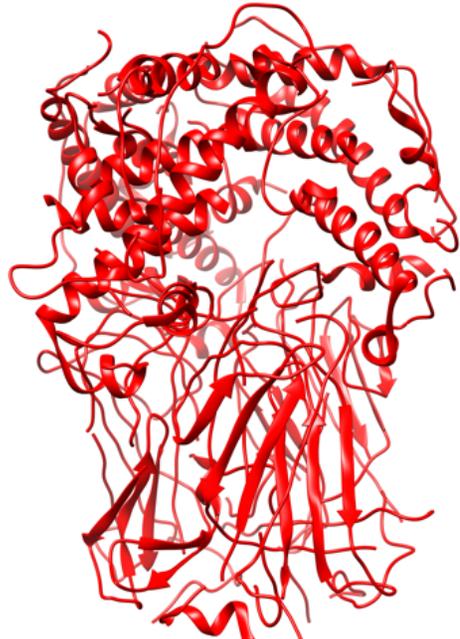

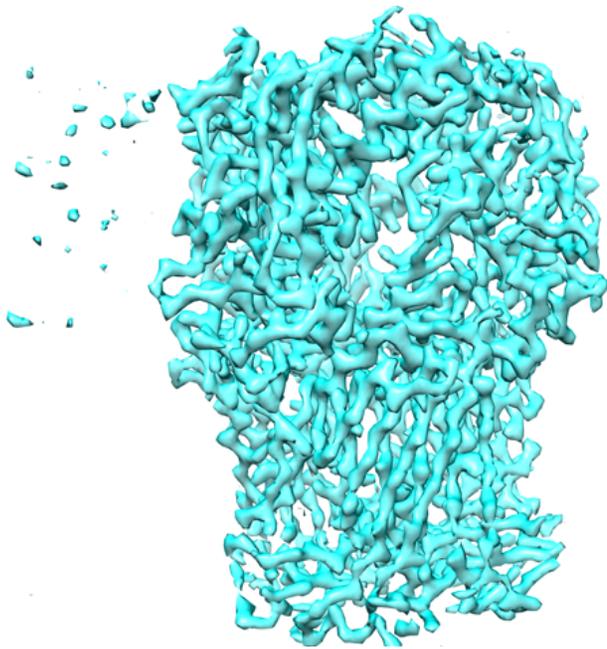

*Rotkiewicz & Skolnick (2008). J. Comp. Chem. 29, 1460.

TRPML3 channel (4.1 Å, 78% built, 1.3 Å rmsd)

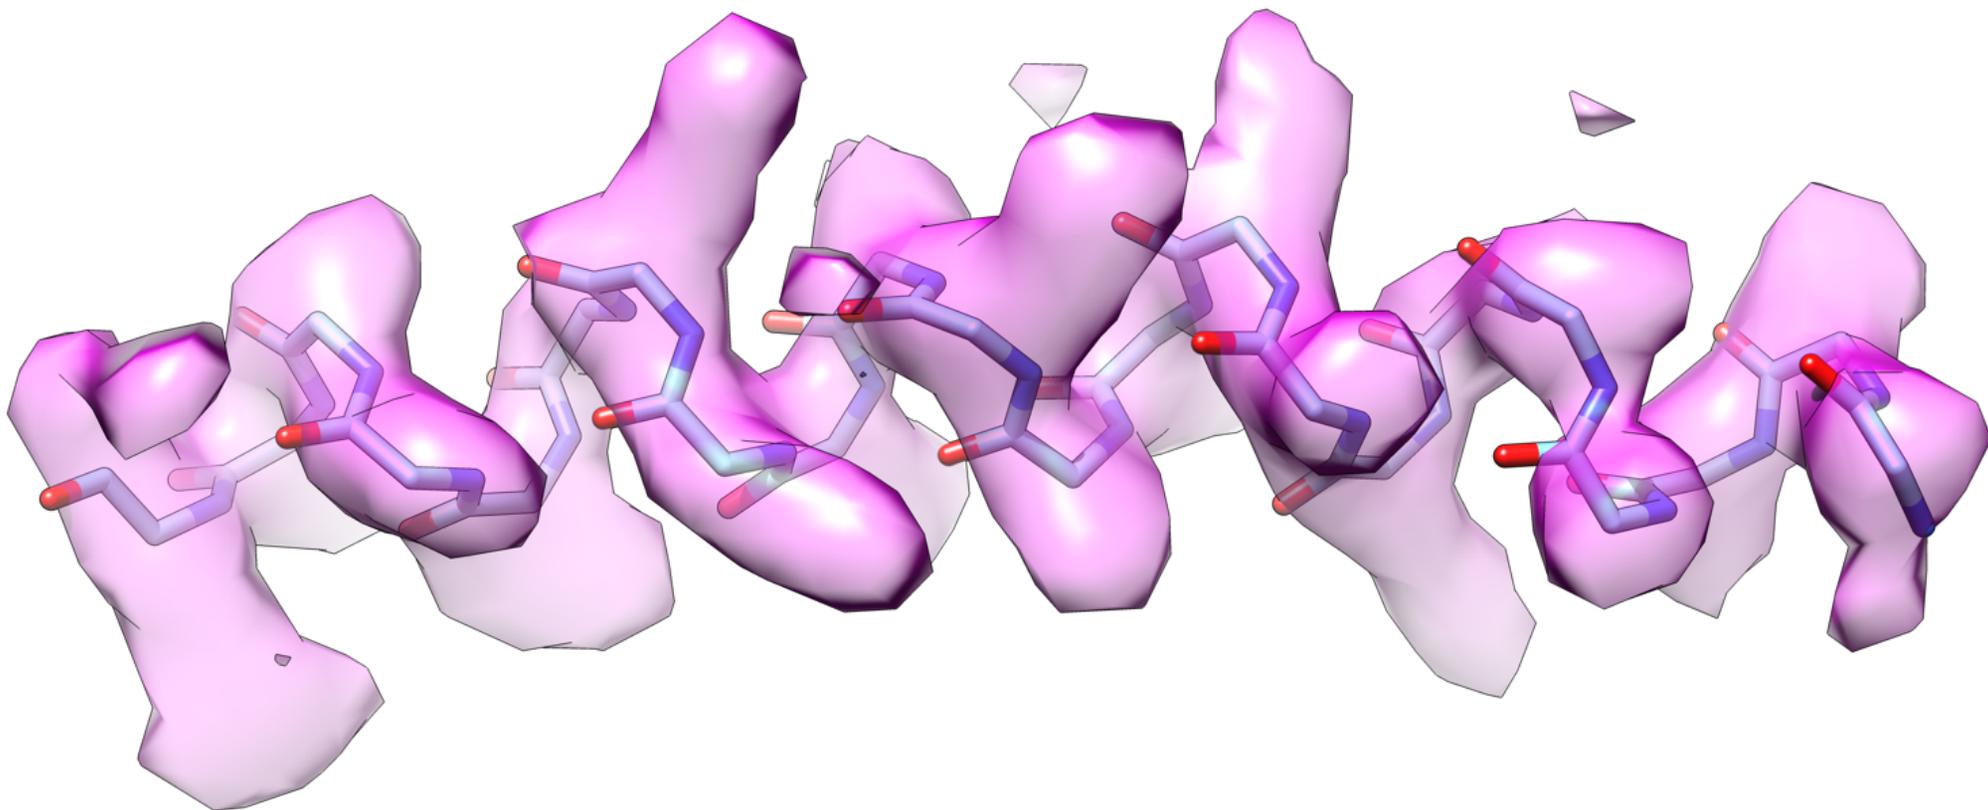

Data from Zhou, X. et al. (2017) Nat. Struct. Mol. Biol. 24: 1146

Rotavirus VP6 (2.6 Å, 100% built, 0.9 Å rmsd)

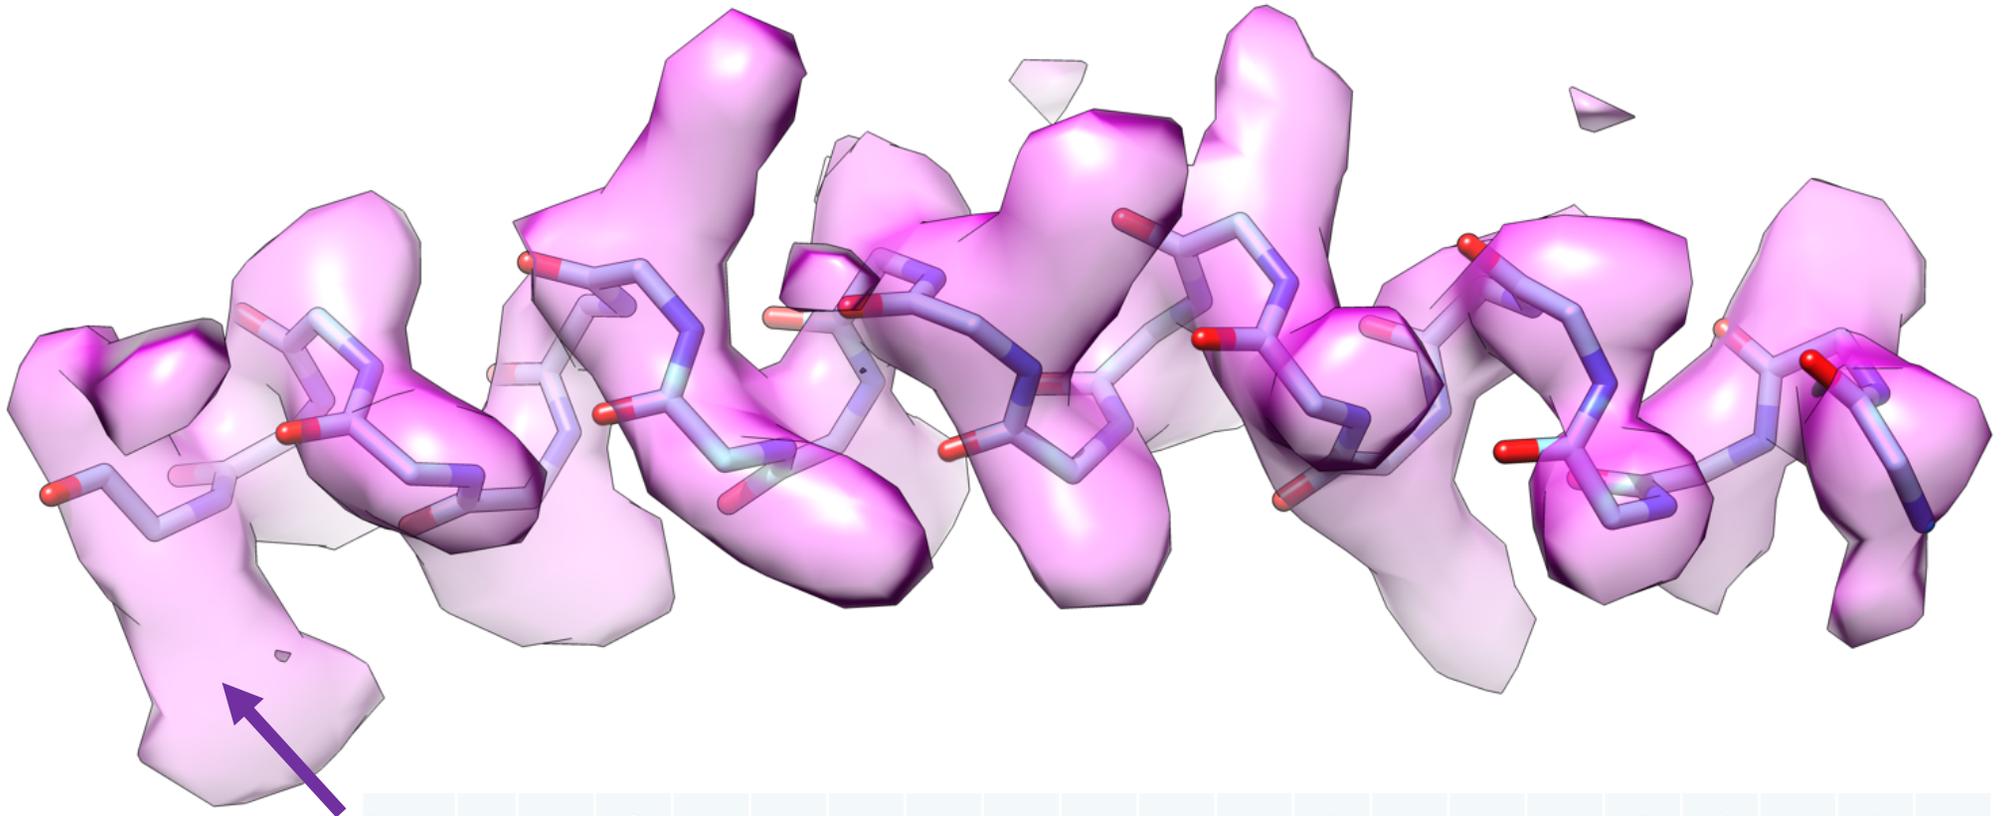

Data from Grant and Grigorieff, eLife 2015;4:e06980

Sequence from density in a map

Can we identify what part of the sequence goes with this helix?

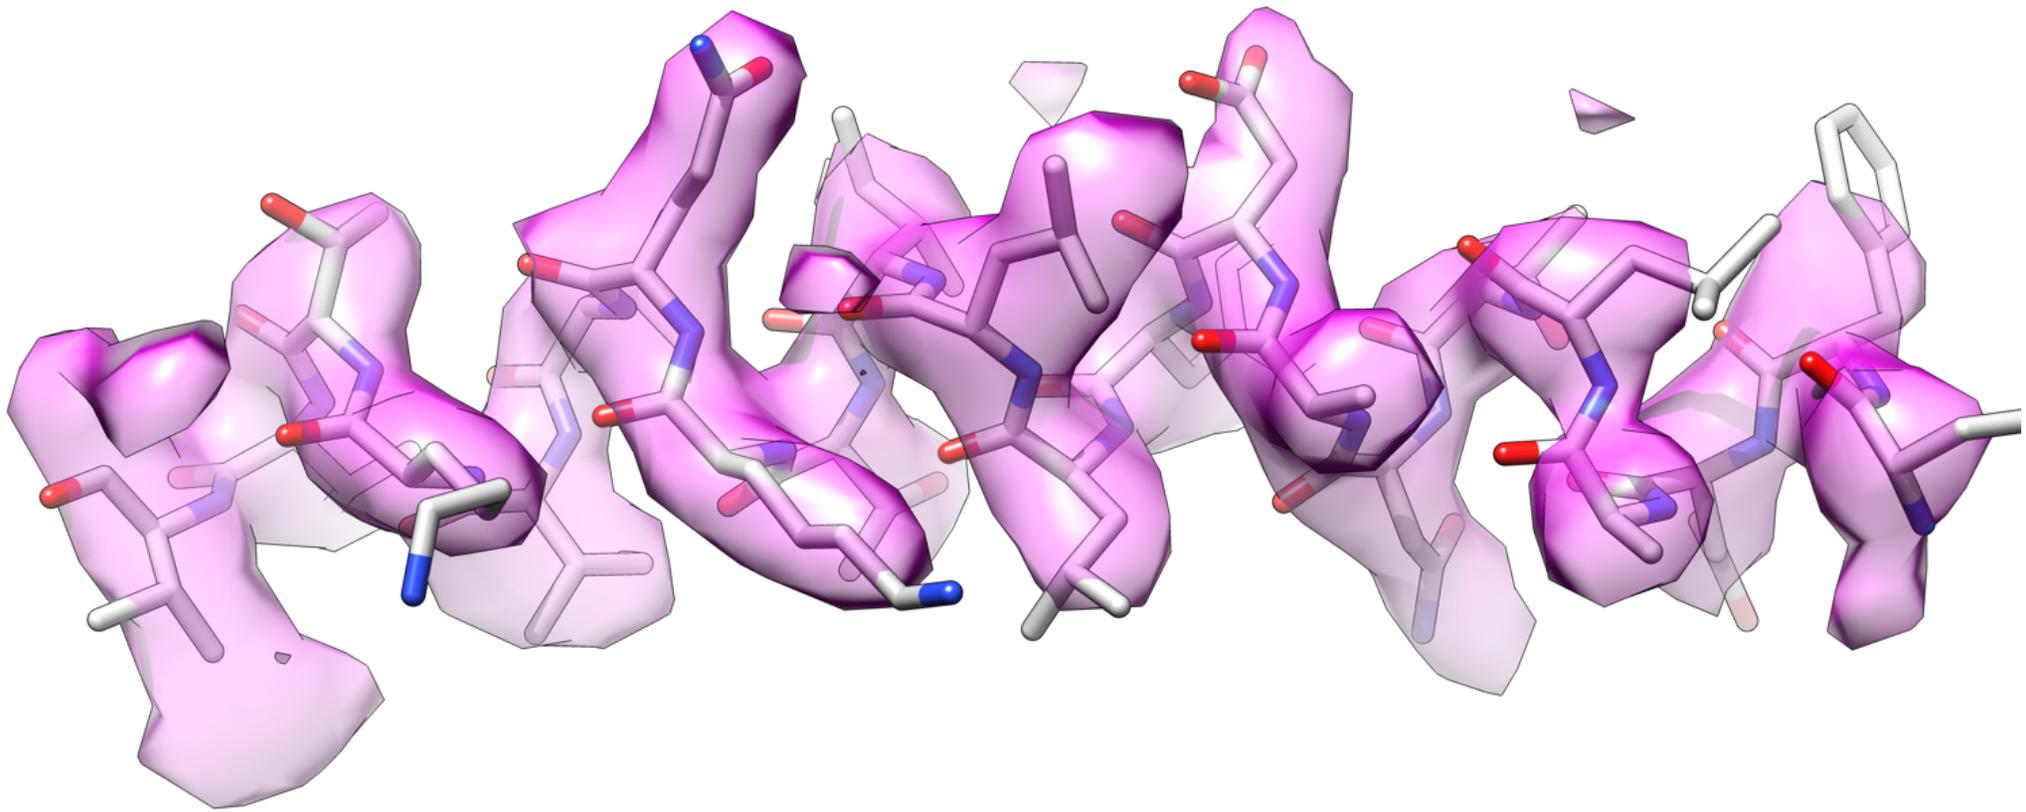

Sequence assignment

Residue	G	A	S	V	I	L	M	C	F	Y	K	R	W	H	E	D	Q	N	P	T
CC	0.30	0.50	0.53	0.47	0.58	0.62	0.68	0.59	0.83	0.77	0.71	0.69	0.70	0.82	0.65	0.64	0.60	0.60	0.35	0.47
Prob	3	0	0	0	0	0	1	0	40	23	5	5	4	9	2	2	1	0	2	0

Compatibility of density at position 21 with each amino acid

Identifying a protein from a map

With Xiaorun Li, Chi-min Ho & Hong Zhou, UCLA

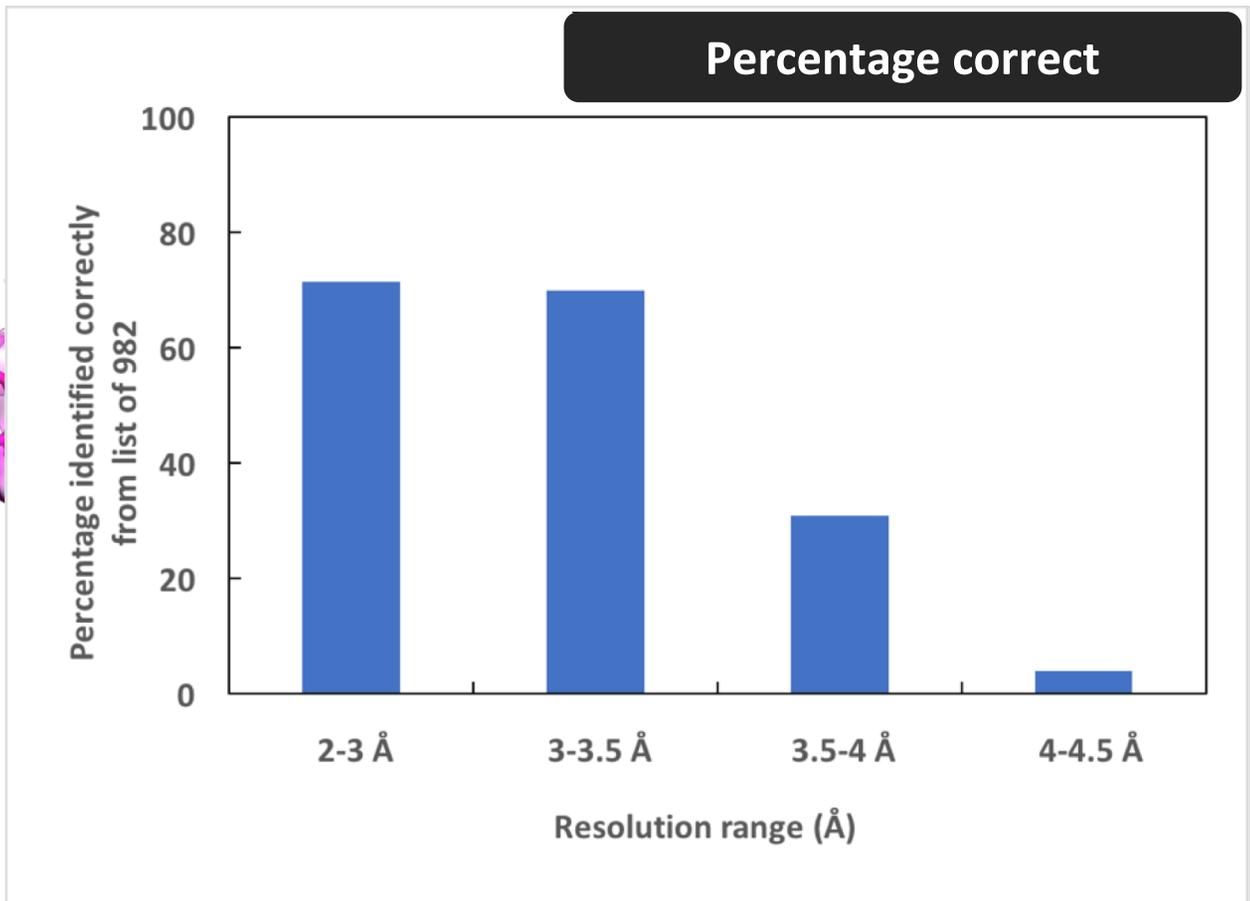

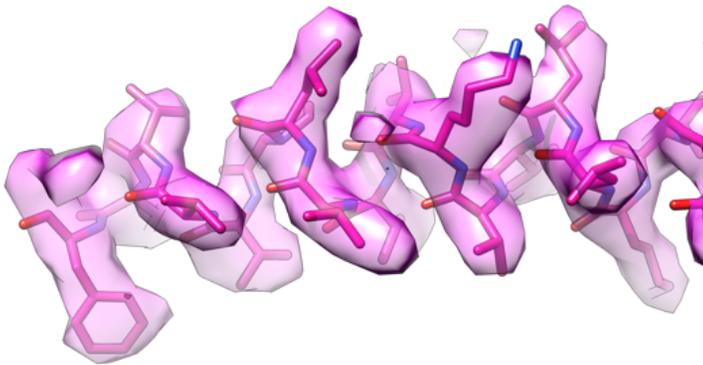

Sequence alignment of full chain against 883 sequences

ID of correct sequence (*P. falciparum* glutamine synthetase)
with Z-score of 6.0

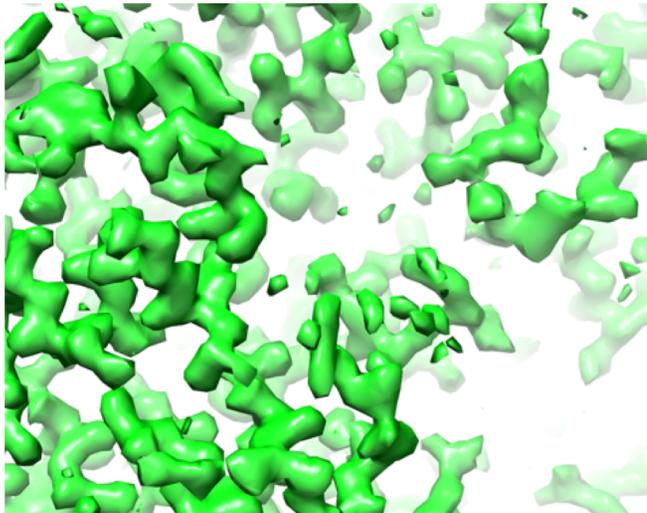

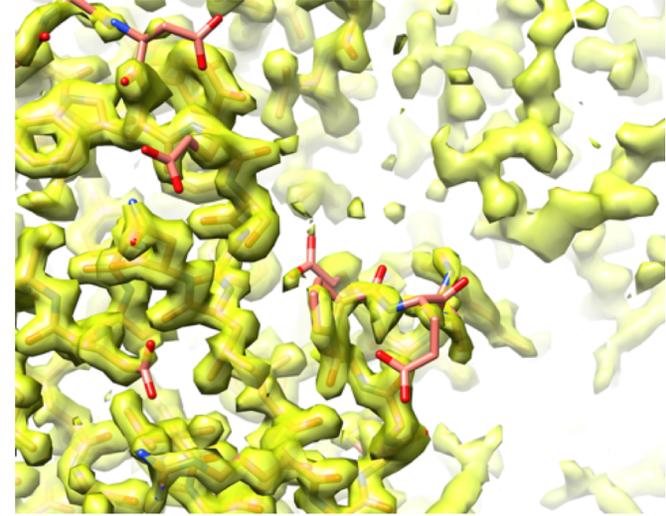

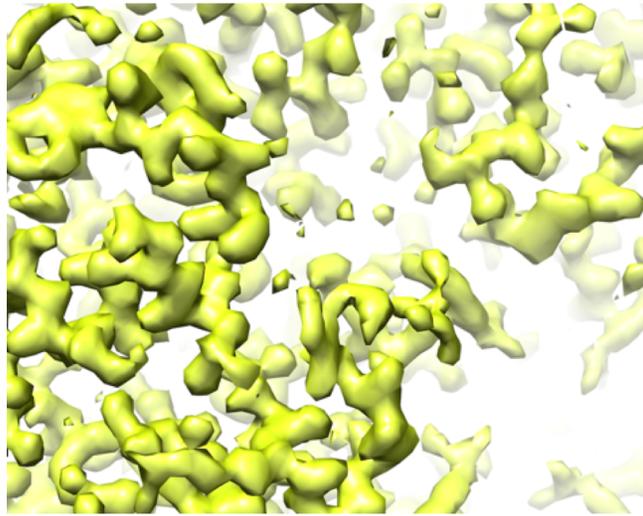

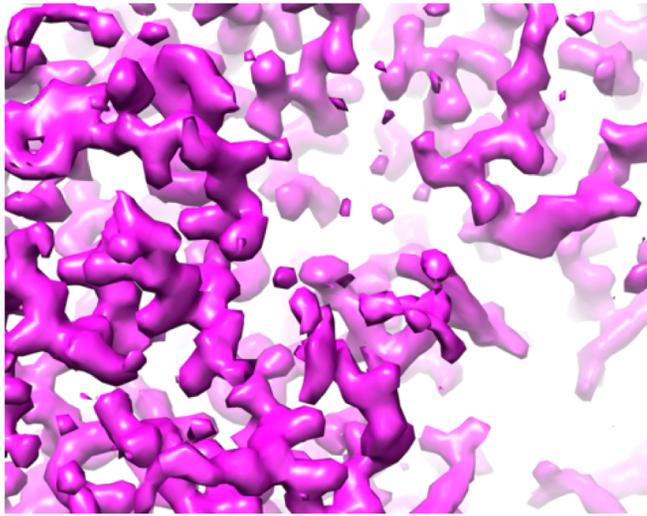

Reliability of identifying a protein from a map

With Xiaorun Li,
Chi-min Ho &
Hong Zhou, UCLA

Build models for 92 maps from EMDB
Each model: Rank 982 sequences by Z-score of fit to density

Demo: model-building from a density-modified map

2 half-maps

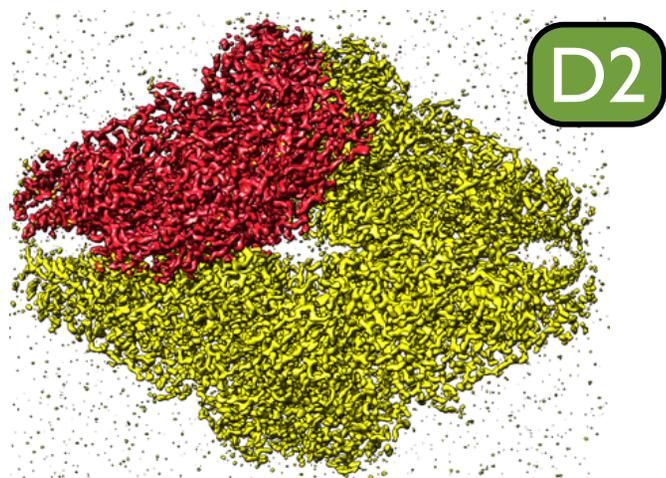

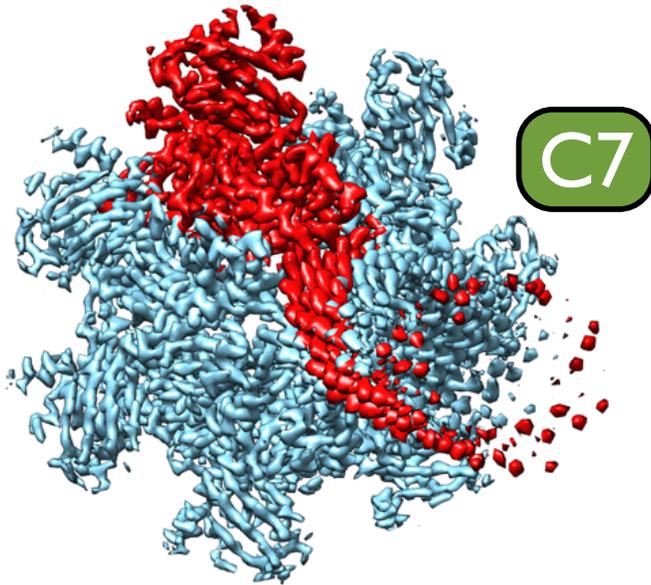

Density-modified
map

Model

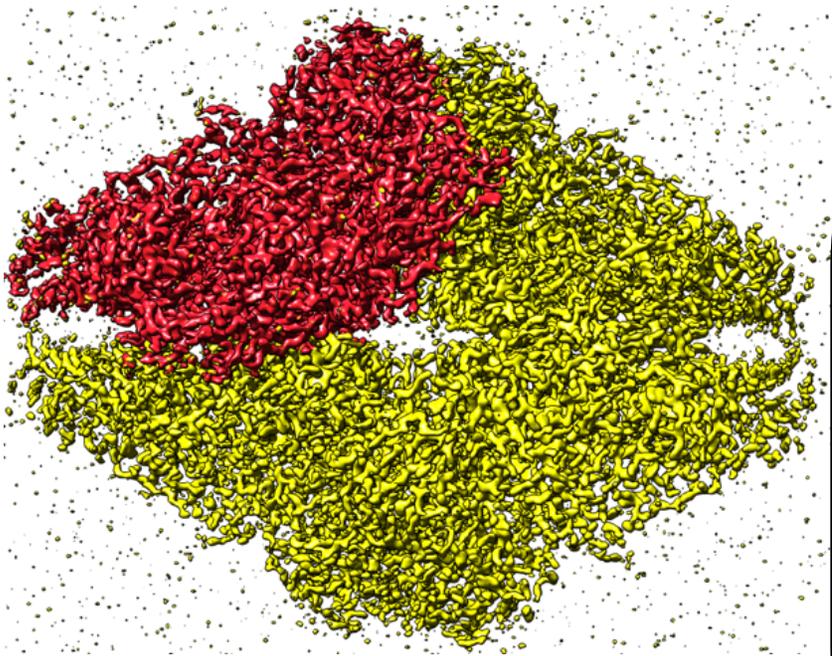

Finding map symmetry with symmetry_from_map

Procedure for finding symmetry:

- Test point group symmetries (e.g., C7, D2, I, O, T)
- Helical symmetry
- Principal rotation axes along z, x, y
- Score based on map correlation for symmetry-related points and number of operators

Extracting unique part of map with map_box (extract_unique option)

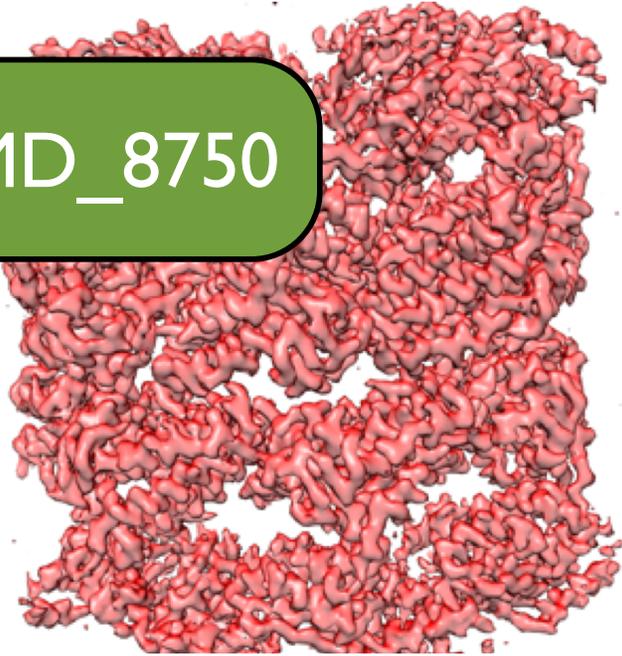

Procedure:

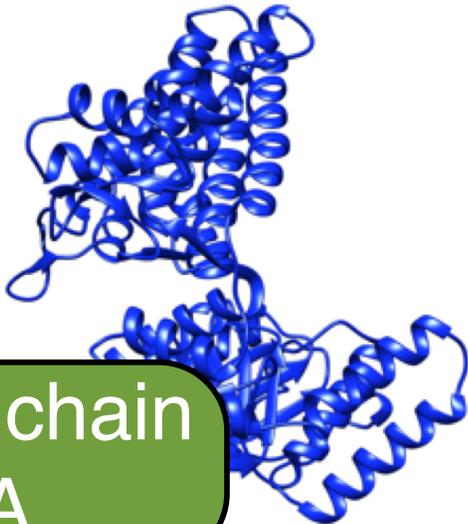

- Use symmetry of map
- Contour map at level that yields regions about 50 residues in size
- Group symmetry-related regions
- Choose one member of each group
- Optimize compactness and connectivity of unique part of map

Docking models with dock-in-map

EMD_8750

1ss8 chain
A

Search procedure:

Pure translation

- low-res
- high-res

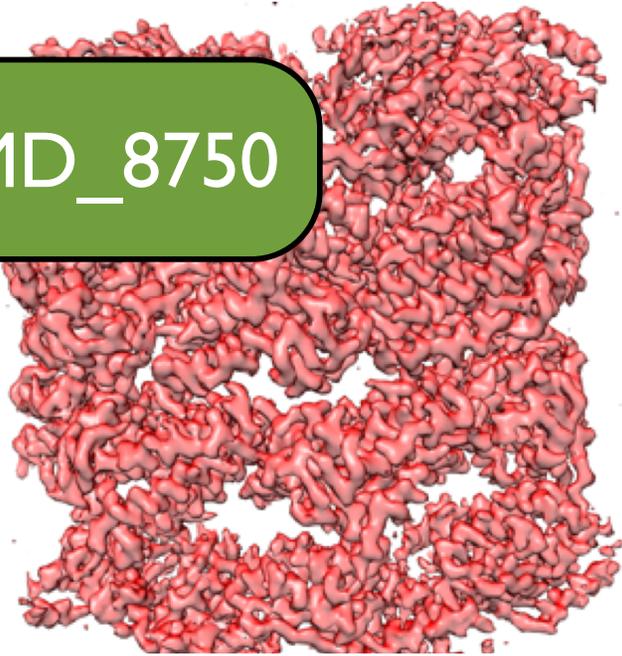

Rotation / translation

- low-res
- high-res

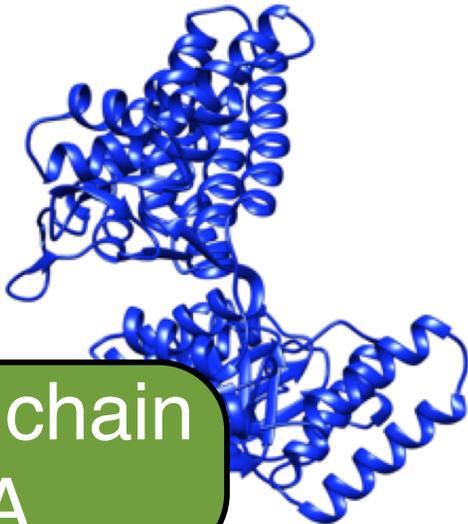

*Score based on rigid-body
refinement map-model correlation*

Docking models with dock-in-map

EMD_8750

1ss8 chain
A

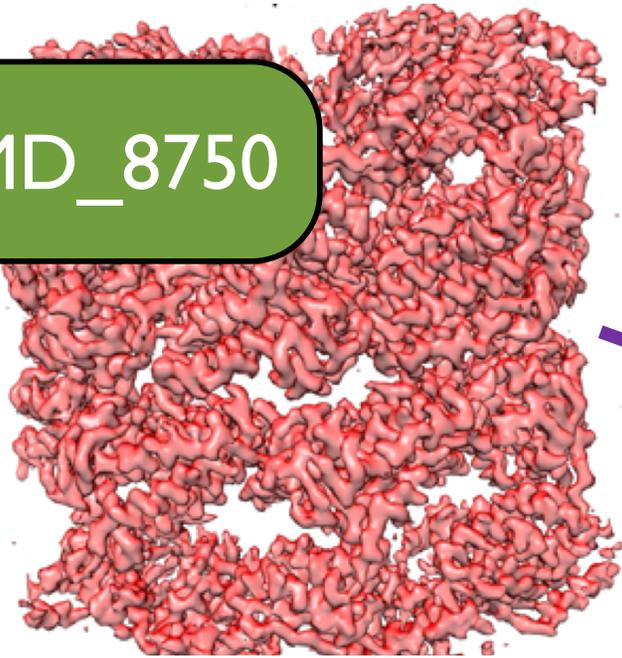

Features

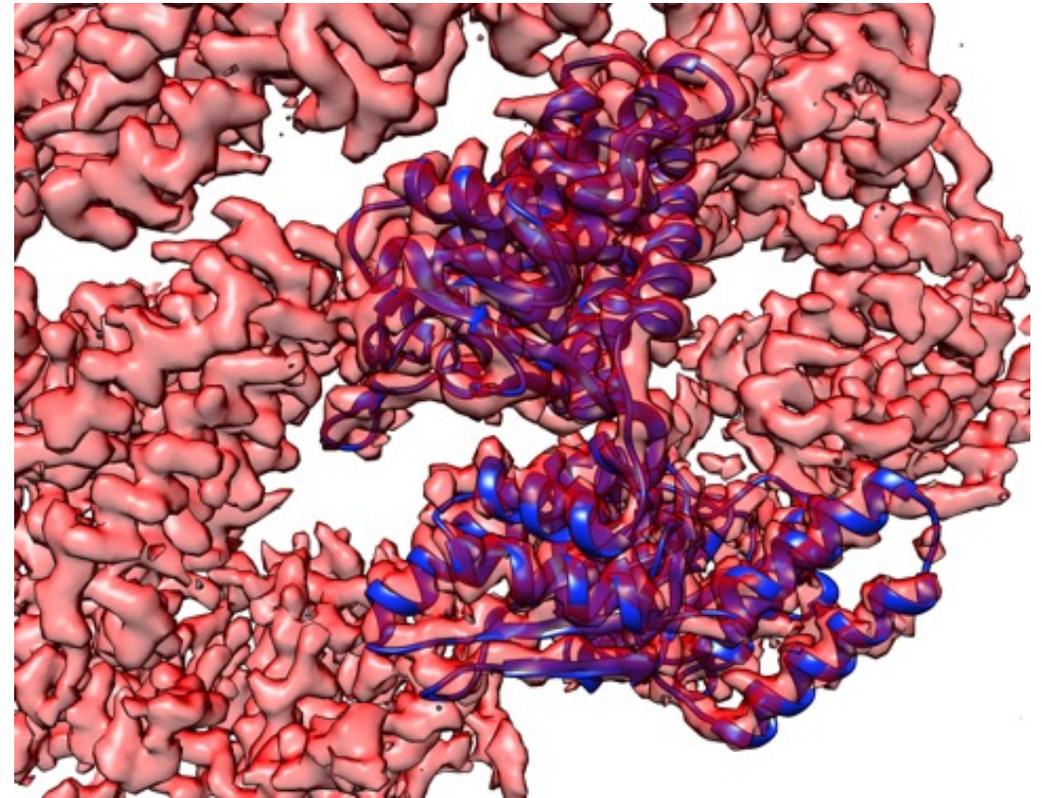

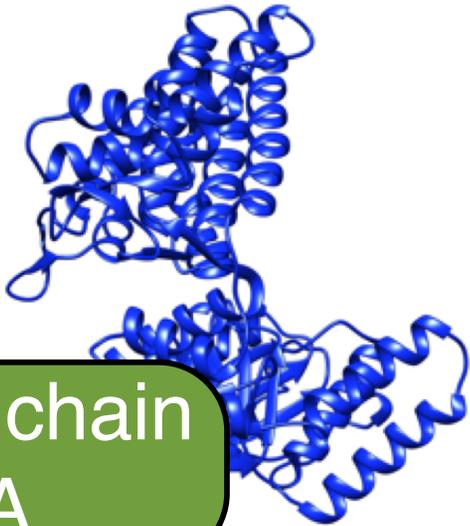

- Multiple chains
- Density search
- Symmetry
- Multiprocessing

Docking models with dock-in-map

EMD_8750

1ss8 chain
A

1ss8 chain A docked
